- Pyogenic Granulomas
- Prolonged Bleeding From Closed Post-Op Wounds

Topical Powder that Stops External Bleeding & Absorbs Exudates

What is PRO QR Powder?

PRO QR Powder is a non-prescription topical powder that stops bleeding and absorbs exudate from minor external wounds and procedures. The ingredients are a mixture of a hydrophilic polymer and a potassium iron oxyacid salt.

PRO QR Powder is not a vasoconstrictor or a cauterizing agent. PRO QR Powder is not biologically derived and is non-toxic.

How does PRO QR work?

When poured on a wound and upon contact with blood or exudate, in combination with manual pressure to the wound, PRO QR Powder quickly forms a strong seal that completely covers the wound and stops the bleeding.

Actual scanning electron microscopy image

- Used by leading hospitals nationwide
- Proven Efficacy - Reduces procedural time
 - PRO QR shows a 96% success rate treating nosebleeds, lacerations, skin tears and abrasions with 70% stopping in less than 15 seconds, according to a clinical study.
- Doctors report PRO QR minimizes re-bleeds
- PRO QR Powder passed all FDA required biocompatibility tests
- Not metabolized by the body and not biologically derived, which minimizes the potential for allergic reactions

Stops External Bleeding
& Absorbs Exudates**

EASY TO APPLY

Excisions: Clean wound. Apply PRO QR Powder when bleeding resumes.

Nail Avulsions:

To Remove PRO QR Seal:
If PRO QR Powder must be removed as determined by a healthcare professional, brush away loose powder then soak wound in sterile water until seal starts loosening from wound. Gently scrape off loosened seal with gloved finger or tongue depressor.

1. Apply PRO QR Powder directly onto blood or bloody exudate. Cover bleeding area completely. Occasionally upon application, a temporary warming or stinging sensation is felt.
2. Apply pressure for 30 seconds to 2 minutes to form the protective seal. If bleeding continues, repeat application.
3. The protective seal is safe to leave in place until it falls off naturally. If desired, dress wound with non-adherent dressing.
